

who is TITAN

OUR HISTORY

The TITAN complex was originally leased from the federal government in 1995 and was acquired in 1997. Since that time, the facility has undergone many upgrades that have transformed this surplus military property into an efficient, highly secure data storage and telecommunications hub. The TITAN Team combines extensive experience in security, data communications, operations, construction, engineering, mechanical systems design, and facilities management. It is a team that has been carefully assembled to ensure the development and manage-

ment of a premier data processing environment. Over the past several years the TITAN Team has worked closely with the local government, the Grant Count PUD and local telecommunications carriers to bring together the key components required to enable a world class computer and telecommunications hub.
